Project 4 — Data Visualization

Boardroom-Ready Insights: From Noise to Signal

Adesola Sobambo | Data Analytics Intern | DecodeLabs | June 2026

Dataset: Sales Orders | 1,200 Rows | 2023–2025

Tool: Power BI Desktop | Star Schema Data Model

Tables: Fact_Orders + Dim_Customers + Dim_Date

$745K Net Revenue	58.91% Success Rate	$520K Lost Revenue

This dashboard translates 1,200 sales orders into five boardroom-ready visual narratives and a consolidated action plan. Each page follows the One Slide, One Message principle — action titles, direct labeling, and the SCR framework to ensure every insight drives a decision.

- Cancelled Orders Drain $276K — Returns Add $243K, With Hidden Costs Still to Investigate
- Facebook Attracts the Biggest Spenders But Drops to 4th When Orders Actually Complete
- 2025 Realisation Rate Collapsed to 49% — April Hit a Record Low of $7,708
- Less Than 1% Customer Retention — The Entire Revenue Base Runs on One-Time Buyers
- SAVE10 Drives 63% Realisation and $203K Net Revenue — WINTER15 Underperforms on Every Metric

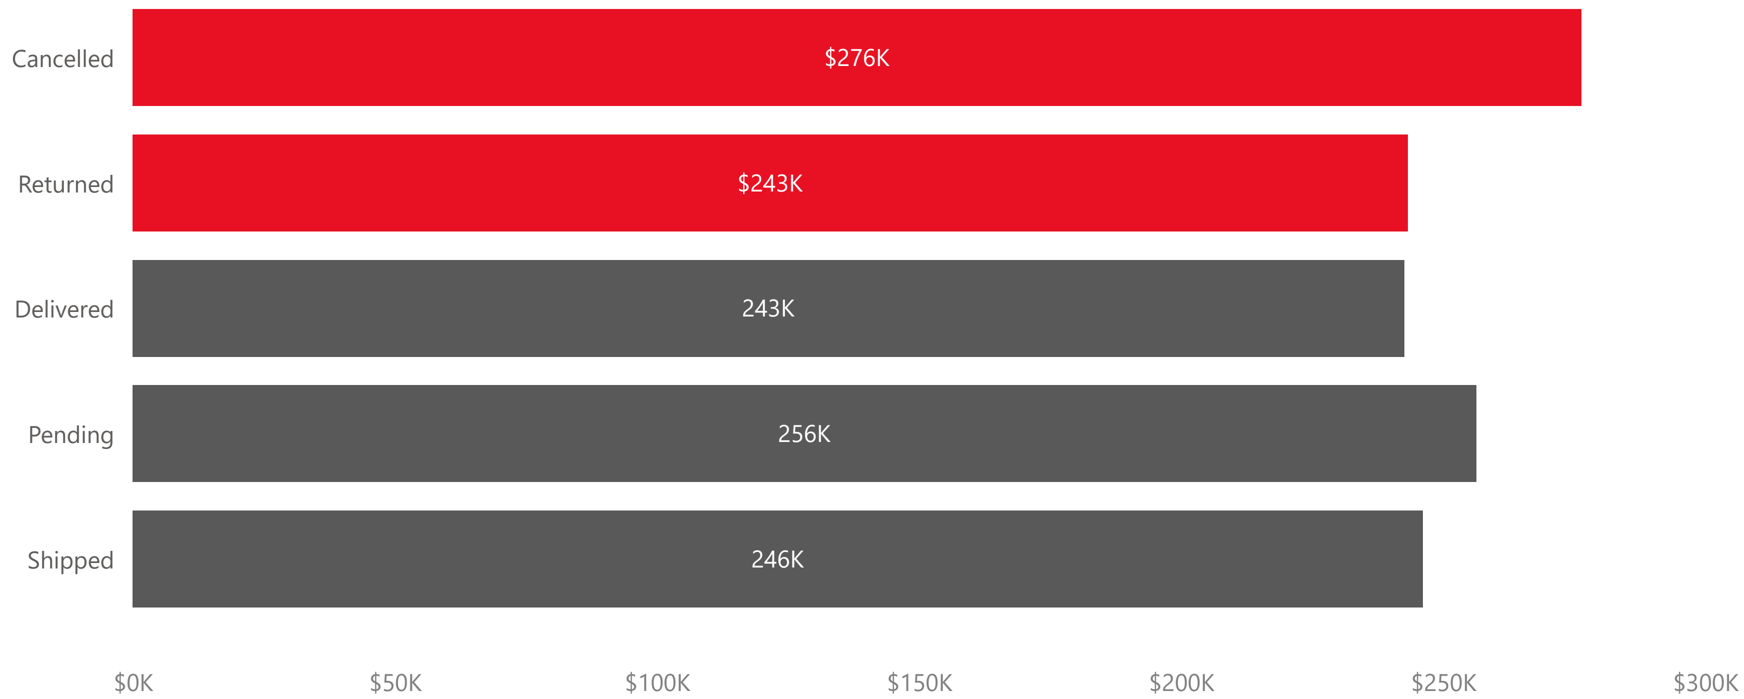
Cancelled Orders Drain $276K in Raw Revenue — Returned Orders Add a Further $243K, With Hidden Costs Still to Investigate

276.40K
Cancelled Revenue

243.28K
Returned Revenue



Situation: 703 of 1,200 orders generate $745K in net revenue — a solid baseline.

Complication: The remaining 497 orders fail in two ways — Cancelled orders drain $276K before products ever leave the warehouse, while Returns cost $243K plus unaccounted operational expenses (double shipping, handling, restocking, and potential inventory damage).

Resolution: Investigate pre-shipment cancellation triggers first — the larger raw loss — then audit return reasons by product to test whether defects or expectation mismatches are driving those additional costs

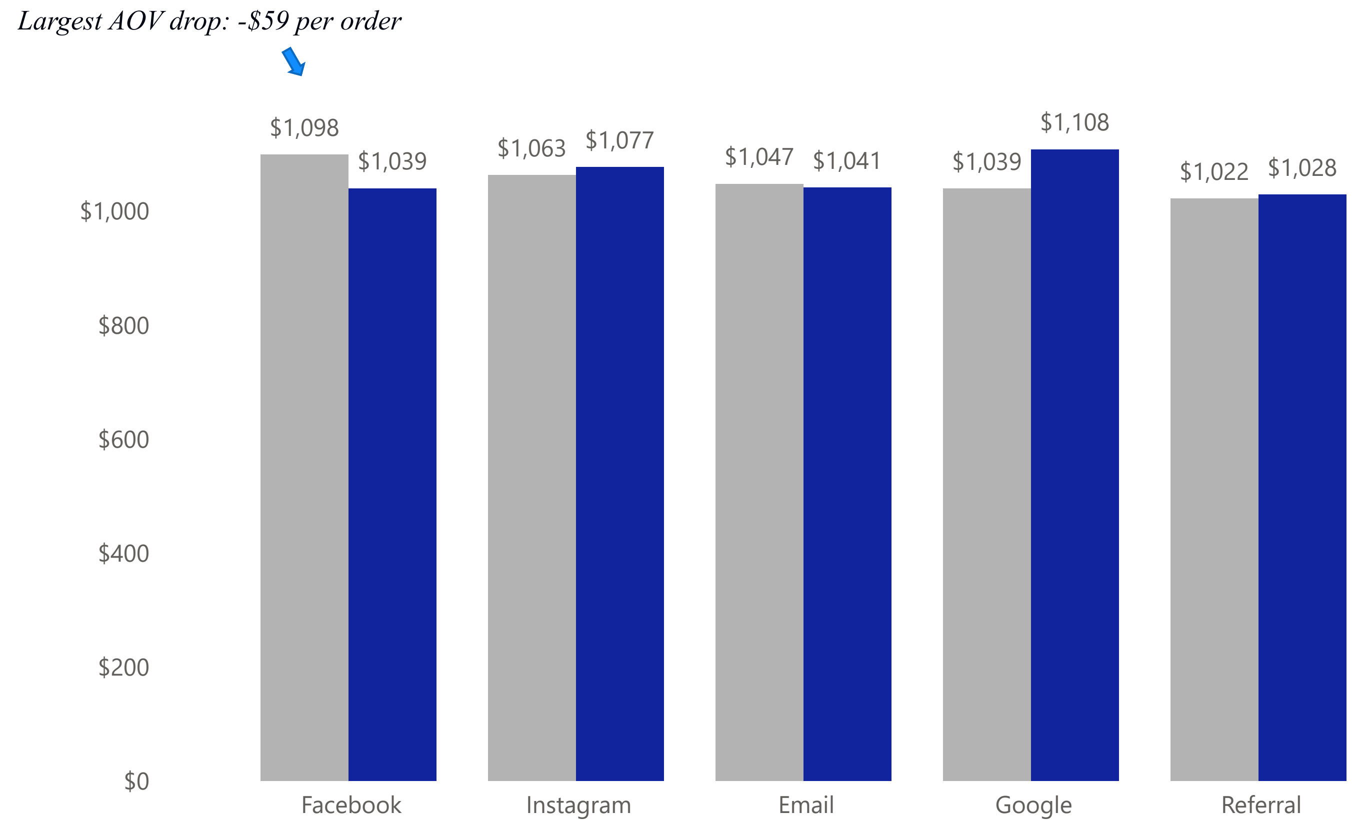
Facebook Attracts the Biggest Spenders — But Drops from 1st to 4th When Orders Actually Complete

$1.10K
Facebook AOV ALL

$1.04K
Facebook AOV Net



Situation: Facebook leads all channels on AOV ($1,098) — biggest spenders.

Complication: AOV collapses to $1,039 on completed orders — 1st to 4th place. Largest AOV drop of any channel (-$59).

Resolution: Audit Facebook targeting. Align with Google/Instagram converter profiles.

Source: DecodeLabs Sales Orders (1,200 rows, 2023–2025) | Analyst: Adesola Sobambo

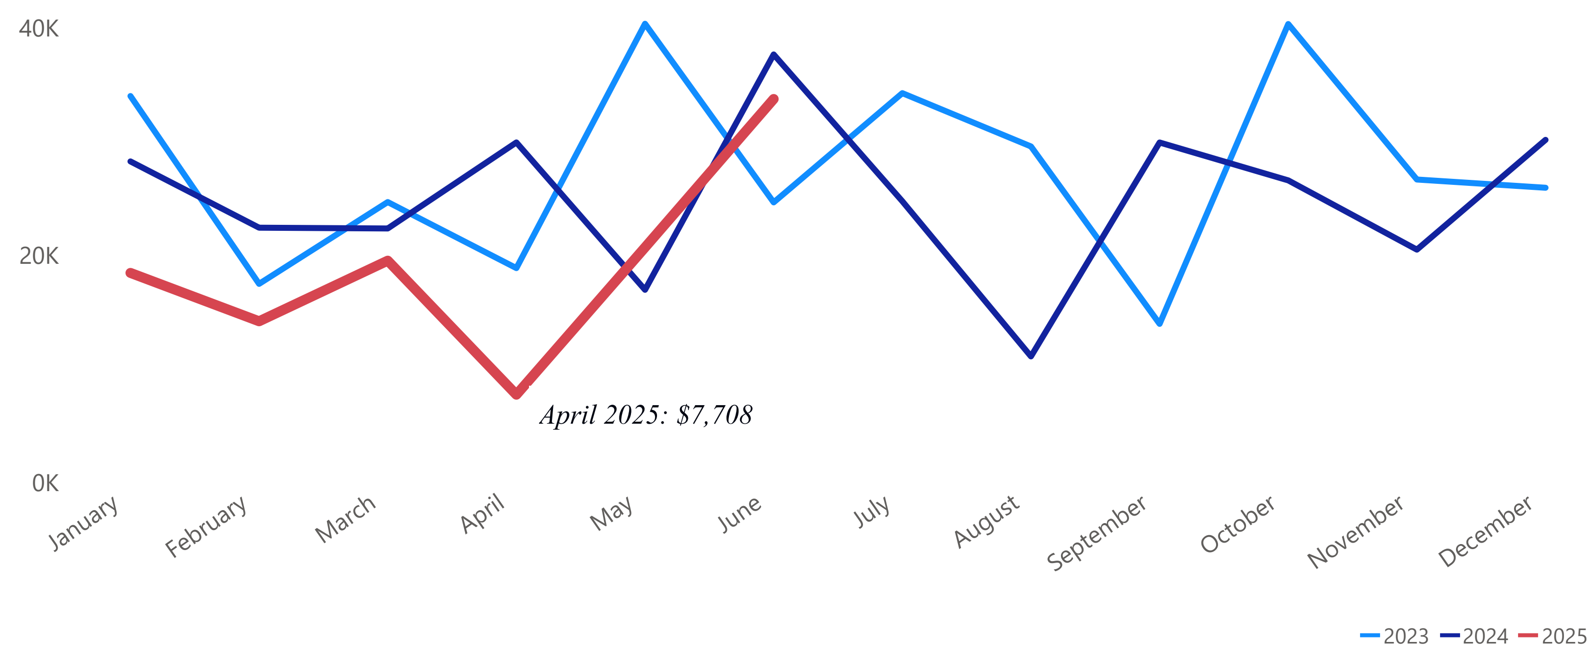
2025 Realisation Rate Collapsed to 49% — April Net Revenue Hit a Record Low of $7,708

$7.71K

April 2025 Revenue

49%

2025 Realisation Rate



Situation: Net revenue averaged $26K/month across 2023–2024.

Complication: 2025 realisation rate fell to 49% — every second dollar of demand is now lost. April 2025 hit $7,708, 74% below April 2024.

Resolution: Investigate what changed after Q4 2024. Introduce a rolling 3-month forecast and a minimum-revenue alert.

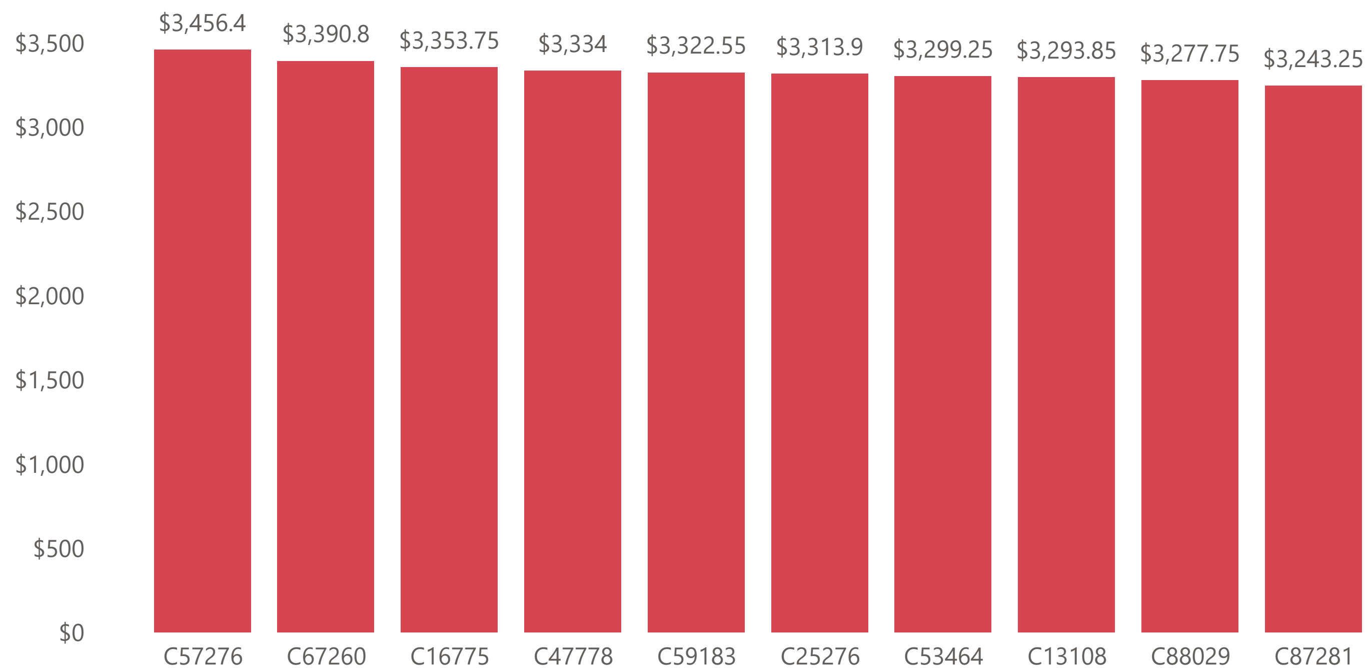
Less Than 1% Customer Retention — The Entire Revenue Base Runs on One-Time Buyers

11
Repeat Customers

1178
One-Time Customers



Situation: $745K in net revenue from 1,189 unique customers.

Complication: Only 11 customers (0.9%) ever returned. The top 10 revenue buyers each placed exactly one order. The entire business runs on first-time acquisitions with no retention engine.

Resolution: Launch retention immediately — post-purchase email flows, loyalty incentives, and win-back campaigns. Even a 20% repeat rate among top spenders would transform lifetime value without spending one dollar on new acquisition.

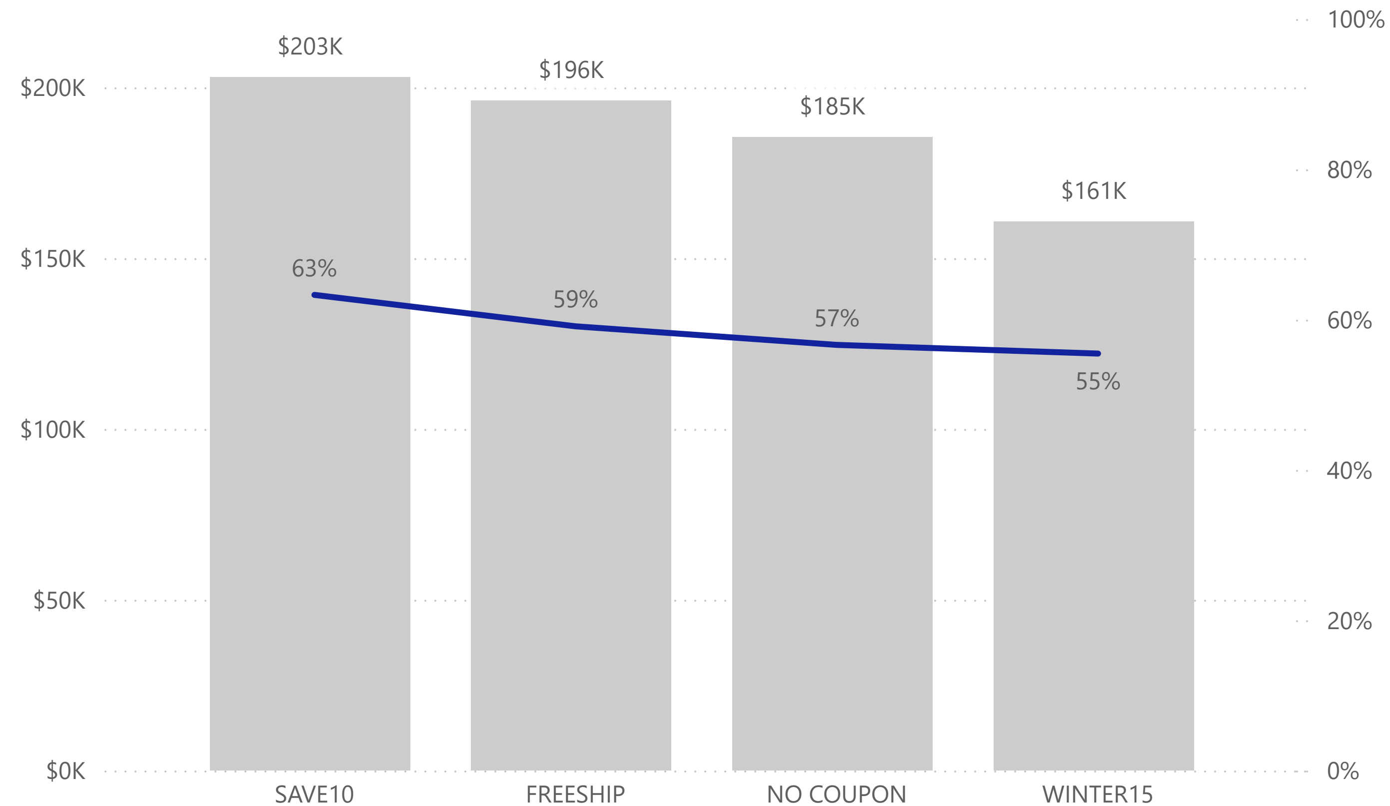
SAVE10 Drives 63% Realisation and $203K Net Revenue — WINTER15 Underperforms on Every Metric

203K
SAVE10 Net Revenue

63%
SAVE10 Realisation Rate

$161K
WINTER15 Net Revenue

55%
WINTER15 Realisation Rate



Situation: 4 coupon categories drive 1,200 orders — SAVE10, FREESHIP, WINTER15, and NO COUPON.

Complication: SAVE10 delivers the highest realisation rate (63%) and highest net revenue ($203K). WINTER15 is the weakest on every metric — lower conversion, lower revenue, higher loss.

Resolution: Retire WINTER15 immediately. Promote SAVE10 as the default coupon in marketing campaigns. Test SAVE10 variants to replicate its conversion advantage across other channels.

Five Decisions the Board Must Make — Based on 1,200 Orders and $1.26M in Gross Revenue

1. Fix the Fulfilment Leak: 497 of 1,200 orders fail before generating revenue. Launch a cancel-reason study and a returns task force this quarter.

2. Audit Facebook Ad Targeting: Facebook attracts the highest spenders ($1,098 AOV) but drops to 4th place on completed orders. Realign targeting with Google/Instagram converter profiles.

3. Diagnose the 2025 Realisation Collapse: Realisation rate fell to 49% — every second dollar of demand is now lost. Investigate what changed after Q4 2024.

4. Retire WINTER15, Promote SAVE10: SAVE10 drives 63% realisation and $203K net revenue. WINTER15 underperforms on every metric. Retire it and redirect spend to SAVE10 campaigns.

5. Build a Repeat-Purchase Engine: Less than 1% of customers ever return. The top 10 spenders each bought once. Launch post-purchase email flows and loyalty incentives immediately.
